Education

Dayananda Sagar College of Engineering Bangalore, India
Bachelor of Engineering in Computer Science; GPA: 8.75 *July 2024 – Present*

Skills Summary

Languages: Golang, Python, TypeScript

Technologies/Frameworks: Gin, Next.js, Flask, Django

Databases/Tools: Kubernetes, CI/CD, PostgreSQL, MongoDB, Docker, Prometheus

Experience

PRED Onsite
Software Engineer Intern: Go, AWS, PostgreSQL *Aug 2026 – Present*

- Working on scalable backend infrastructure for a high performance sports prediction exchange
- Hands-on experience with real-time trading systems, order-book infrastructure, and on-chain settlement

Seeqlo Remote
Backend Developer Intern: Go (Gin), Firebase, Stripe *Aug 2025 – Feb 2026*

- Integrated **Stripe** for secure payments and implemented a **token-based credit system** to control user access and resource consumption.
- Migrated a legacy backend from **Express.js** to **Go (Gin)** to enhance performance, and refactored a monolithic codebase into modular components to improve maintainability.
- Built a community administration interface enabling admins to **monitor user activity** and **manage platform content**.

Ignito Co. Remote
Fullstack Developer Intern: Go (Gin), Next.js, MongoDB, Supabase *July 2025 – Aug 2025*

- Built an inventory management system using **Next.js** and **Supabase** to ingest and process large Excel datasets, optimizing the pipeline to reduce processing time from **7 minutes to 16 seconds**.
- Engineered a **full-stack** application using **Go (Gin)** and **MongoDB** to manage the end-to-end lifecycle of purchase orders, bills, and inventory tracking via scalable RESTful APIs.

Open Source Contributions

Debian - Salsa CI Salsa

- Migrated the base-image build pipeline to use **mmdebstrap** and **buildah**, replacing external **Docker Hub** pulls with native archive builds to resolve rate-limiting errors.
- Added CI test case for the **Debian Trixie** release, utilizing the **grep** package to validate build compatibility and testing environment readiness.

OpenTelemetry Operator OpenTel

- Implemented automated Markdown link validation using **Linkspector** with **GitHub Actions**, running on pull requests and a weekly **cron** schedule to prevent documentation regressions.
- Deprecated the **volumeSizeLimit** field across all language-specific instrumentations and added a **validating webhook** to emit warnings for deprecated usage.

Certifications & Achievements

- Certified Kubernetes Application Developer (CKAD) - July 2026
- Won Unique Idea award at Hack-Nocturne '26 held at SMVIT - March 2026
- Recipient of the **LiFT Scholarship** awarded by The Linux Foundation - June 2025
- Won Coding Relay held at Dayananda Sagar College of Engineering – March 2025
- Ranked Top 9 out of 63 teams in HackOasis V2 Hackathon – November 2024
